

E-Commerce: NetView client access

Ongoing MTE Logistix clients can access our Warehouse Management System from a secure internet web portal:

- Client access via Internet web browser, with assigned security passwords
- Full visibility of client inventory; check inventory quantity and current status
- Complete inventory details; including lot codes, serial numbers, & expiry dates
- Real time tracking of open client transactions; inbound or outbound
- Clients create their own inventory or activity reports, for printing or download
- Easy client entry of new shipping orders

The image displays several overlapping screenshots of the MTE NetView web portal. The top screenshot shows the main navigation menu with options like Home, Inbounds, Inventory, Outbounds, Create Outbounds, Report Request, and Bulletin Board. Below this, the 'Inbound Details' section is visible, showing a table with columns for Line, Type, and Product. The 'Lot Activity' section displays details for a specific product (800208) and its stock keeping unit (BOX). The 'Product List' section shows a table with columns for Available, Product SKU, Code, Description 1, and Description 2. The 'Create Outbounds' section contains form fields for References/Destination and Transportation, including fields for Service Level, Freight Type, Carrier, Carrier Name, and Payment/Control Method.
